

How to open a JPEG in a RAW converter for editing in Photoshop Elements (PSE)

1. Open PSE in the Editor mode.
2. Go to File>Open in Camera RAW and left click.
3. In the dropdown box, browse for your image, highlight it and left click on Open. Wait a few moments and your image will open in the RAW converter where you can edit it using the tools provided such as Clarity.
4. When complete left click on Open Image and it will open in Elements where you can finish the job and save it.
